

Acupuncturist in Owen Sound

Acupuncturist in Owen Sound - IV therapy or also known as Intravenous therapy is the placing of substances straight into a vein. IV therapy has been used to correct electrolyte imbalances and to be able to deliver medications in blood transfusions. It can likewise be used as fluid replacement to correct, like for instance, dehydration. The intravenous route is the fastest way to deliver fluids and medications all through the body. Several medications, as well as blood transfusions and lethal injections, could only be given intravenously.

Intravenous Vitamin C therapy is an alternative treatment utilized for several medical sicknesses like for example cancer. Even though there is still controversy surrounding this particular form of remedy, many centers dedicate specific treatment regimens. Amongst the reputed benefits of Vitamin C therapy consist of: increasing the quality of life and prolonging survival. Vitamin C is useful in preventing systemic free radical injury and corrects an ascorbate deficiency, which is normally found in cancer patients. Vitamin C inhibits hyaluronidase. This is an enzyme made by cancer cells which is responsible for the breakdown of healthy tissue, leading to metastasis and tumor progression. Vitamin C also works synergistically conventional with various traditional cancer treatments.

Other names for Vitamin C, include: L-ascorbate or L-ascorbic acid. It is an essential nutrient for humans and other animals. It is a prime antioxidant and protects the body against stress due to oxidation. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions comprising various collagen synthesis reactions that cause the most severe signs of scurvy when they are not working correctly. In animals, these enzyme reactions are really important in preventing bleeding from capillaries and wound-healing.

Vitamin C Mega Dosage

There are a lot who fully advocate and endorse using Vitamin C, in excess of ten to one hundred times more than the RDI or Recommended Daily Intake. Supplements of Vitamin C can be taken by intravenous therapy or orally. There have yet to be large, randomized clinical trials on the effects of high doses done on the general people. Linus Pauling spent a large portion of his life advocating the use of mega doses of vitamin C. He believed the established RDA was enough to prevent scurvy but not necessarily a high enough dosage for optimal health.

Mega doses of vitamin C have been used in the prevention and treatment of various conditions comprising cancer, coronary disease and the common cold. Current RDI for vitamin C is 60 mg however, some references quote at least 30 mg and others state we should have a minimum of 100 mg a day. People taking a mega dose may ingest anywhere from 500mg to 1000 mg on a daily basis but the side effect of diarrhoea may be a common issue for people who ingest large amounts.
