

Hyperbaric Oxygen Therapy Owen Sound

Hyperbaric Oxygen Therapy Owen Sound - Oxidative therapy is performed by introducing extra energy inside the body. This could be performed in 3 ways: utilizing Hyperbaric Oxygen and introducing oxygen inside the body under pressure, through an infusion of H₂O₂ or Hydrogen Peroxide in a vein for roughly one hour or by mixing blood with Ozone gas. It just takes a tiny amount of Hydrogen Peroxide in order to produce a large amount of oxygen, therefore, areas on the body that suffer from poor circulation can benefit greatly from the supply of oxygen.

Oxidative therapy has been made use of since the 1920's, when Dr. T.H. Oliver initially made use of Intravenous Hydrogen Peroxide during an outbreak of influenza. This successful treatment helped many people and results were reported in the Lancet, a British medical journal. A few years later, Dr. Charles Farr published a paper entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This particular paper has become the protocol for doctors who administer H₂O₂.

The theories surrounding this therapy vary in its explanation of how this particular treatment works. Several scientists and researchers have discovered that the presence of H₂O₂ in the body is more complex than originally believed. The benefits of Oxidative Therapy have been shown helpful for the following health illnesses: Cerebrovascular Disease, Cardiovascular Disease, Cardiac arrhythmia, Coronary spasm, Asthma, Peripheral Vascular Disease, Pulmonary Diseases, COPD, Raynaud's Phenomenon, Influenza, Bronchiectasis, Chronic Bronchitis, Herpes Simplex Virus, HIV, Lupus, Immune Disease, Alzheimer's, Multiple Sclerosis, Fibromyalgia, Chronic Fatigue, Rheumatoid Arthritis, Environmental Poisonings, Parkinson's Disease, Migraines, among others.

The energy producing chemical response of oxidation is essential within the body because the body makes use of different forms of oxygen. In order to prevent damage to surrounding normal tissue, treatments should be controlled carefully. Anti-oxidants which come in the kind of vitamins and enzymes would help to protect the body from whatever damage caused by oxidation. Nevertheless, the immune system utilizes oxidative energy as a weapon so as to directly kill infectious agents like for example yeast, bacteria, parasites and viruses.
